

This directory is intended to assist modellers who often struggle to dream up a fictitious livery (like me), or those who prefer an authentic livery with correct colours, vehicle and body type with correct registration and fleet numbers. This data is based on archive photographs, fleet histories and personal knowledge. Fleet numbering in many companies appears impossible to understand, very few seem to apply sequential numbering.

**Step 1.** Research the fleet and lorry you wish to build, purchase the transfer set. This contains an image showing fleet colours and layout of lettering.

**Step 2.** Ensure you have all the modules for your specific model.

**Step 3.** Refer to Sheet 5 'Colour mixing chart' to match the colour shades on the transfer image. You're ready to start!

**New additions since last issue in bold.**

(updated 23 April 2012)

<b>Vehicle type</b>	<b>Reg No.</b>	<b>Fl. No.</b>	<b>RTI parts required</b>
